

## Camber Spine Technologies Announces 510(k) Clearance for Their Siconus™ SI Joint Fixation System

WAYNE, Pa., Jan. 23, 2017 /PRNewswire/ --

**SICONUS™**  
SI JOINT FIXATION SYSTEM

Camber Spine Technologies, today announced that it has received 510(k) clearance for their Siconus™ SI Joint Fixation System. Siconus™ becomes the second product in the Camber Spine Technologies portfolio to treat sacroiliac disease, as a complement to the Prolix™ custom machined allograft implant.

"The Siconus™ SI Fusion Screw System is an important addition to our growing portfolio of devices and completes our exclusive SI Fusion product portfolio." said Daniel Pontecorvo, Founder and CEO of Camber Spine Technologies. "Siconus™ provides superior compression across the SI Joint over multiple turns of the threaded fixation implants. When used with the Prolix™ SI Joint Fusion System, the combined solution offers a direct visualization and insertion of a machined allograft spacer into the SI joint, followed by a lateral approach compression and fixation implants. The combined solution may be the only MIS SI Joint Fusion technology to foster a *True Fusion* of the SI Joint."

The Siconus™ SI Fixation System is intended to provide fixation and stabilization of large bones, including the sacrum and ilium. It is intended for use in skeletally mature patients as an adjunct to sacroiliac joint fusion in the treatment of the degenerative sacroiliitis, or sacroiliac joint disruptions.

Siconus™ was developed under a collaborative agreement with the Institute for Musculoskeletal Science & Education (IMSE), an independent, full-service product development and engineering services company.

## About Camber Spine
